INTRODUCTION

We deliver maritime
Safety and trust on time

HML is one of leading service providers of heavy marine transportation. We own and operate 4 heavy transport vessels, which comprises of 3 world-class self-propelled deck carriers and 1 Semi-submersible.
HML has built its in-house engineering center, equipped with marketing-leading software, comprising a versatile field of engineering to support challenging, project-specific requirements. HML has delivered excellent transportation service in vessel operation and engineering with the utmost safety for more than a decade.

CROSS-MARKET PROJECTS

- OIL & GAS
- SHIPBUILDING
- HEAVY MACHINERY
- PORT EQUIPMENT
- RENEWABLES
- CIVIL CONSTRUCTION

HISTORY

2009 ~ 2019

2009 **HMT Megaline Co., Ltd. established**

2010 **ITW Megaline Co., Ltd. established**

2013 **Awarded and participated in the "Transportation & Installation Industry Study" hosted by Korean Government.**

2014 **Awarded "Best Company for Safety Management & PSC control" Prize by KR (Korean Register).**

2015 **Awarded "Best Company for Maritime Safety" Prize by the MOFT (Korean Ministry of Oceans and Fisheries).**

2018 **Long-Term contract with Samsung Heavy Industry for ship blocks transportation.**

2019 **CVC contract with LINDE, Germany for "New Pitch Gasification Plant Project" in Singapore.**

PROJECT EXPERIENCES

Voyage of HML
Milestones HML from oct.2009 to recent
Adding interex-> HMT/ITW -> HI Megaline -> HML history

Contents
HML has undertaken a number of significant oil & gas projects in recent years, most notably Gorgon & Wheatstone LNG in Australia and Gina Krog Project in the North Sea. Mega Caravan, Mega Caravan 2, and Mega Trust were each awarded two year contracts, with CHEVRON exercising multiple extension options that eventually increased the charter period to roughly 4 years.

HML FLEET

At our company, we provide flexible and affordable plans by making the optimal use of the large deck on our vessels. Even in challenging circumstances, our large DWT vessels are designed with high deck capacity for stability, ensuring safe and efficient cargo discharge.
We are dedicated to safety, sustainability, and environmental responsibility, implementing international standards such as ISM, ISPS, and CSO rules.

MEGA CARAVAN

LOA	163.8 m
Breadth	54.0 m
Free deck	140.0 m x 54.0 m
Depth	10.5 m (wide deck)
Draft	6.0 m
Deadweight	16,200 mt
Speed	12.0 knot
Propulsion	3,900 kw x 2 set
Ballast capacity	Pump 4 ea x 2,500 m^3/ hr

HML Vessel lists

MEGA CARAVAN – DWT, Heavy Transport Vessel, Free deck space
MEGA CARAVAN2 – DWT Heavy Transport Vessel, Free deck space
N/B (TBN) – DWT - HTV, Free deck space

Partner Vessel list

- MEGA PASSION - DWT, Semi-submersible, Free deck space
- MEGA TRUST – DWT, HTV , Free deck space
- Jin Xu Xiang 88 – DWT, Open deck carrier , Free deck space
- Shang De Wu Yi Shan – DWT, Open deck carrier, Free deck space
- Chang Yang Dong Fang – DWT, HTV, Free deck space

MEGA CARAVAN 2

LOA	163.8 m
Breadth	42.0 m (mld) / 47.0 m (max)
Free deck	140.0 m x 47.0 m
Depth	9.5 m
Draft	6.0 m
Deadweight	17,700 mt
Speed	12.0 knot
Propulsion	3,900 kw x 2 set
Ballast capacity	Pump 4 ea x 2,500 m³/ hr

PARTNER VESSEL

MEGA PASSION
DWT, semi-submersible, free deck space

MEGA TRUST
DWT, HTV, free deck space

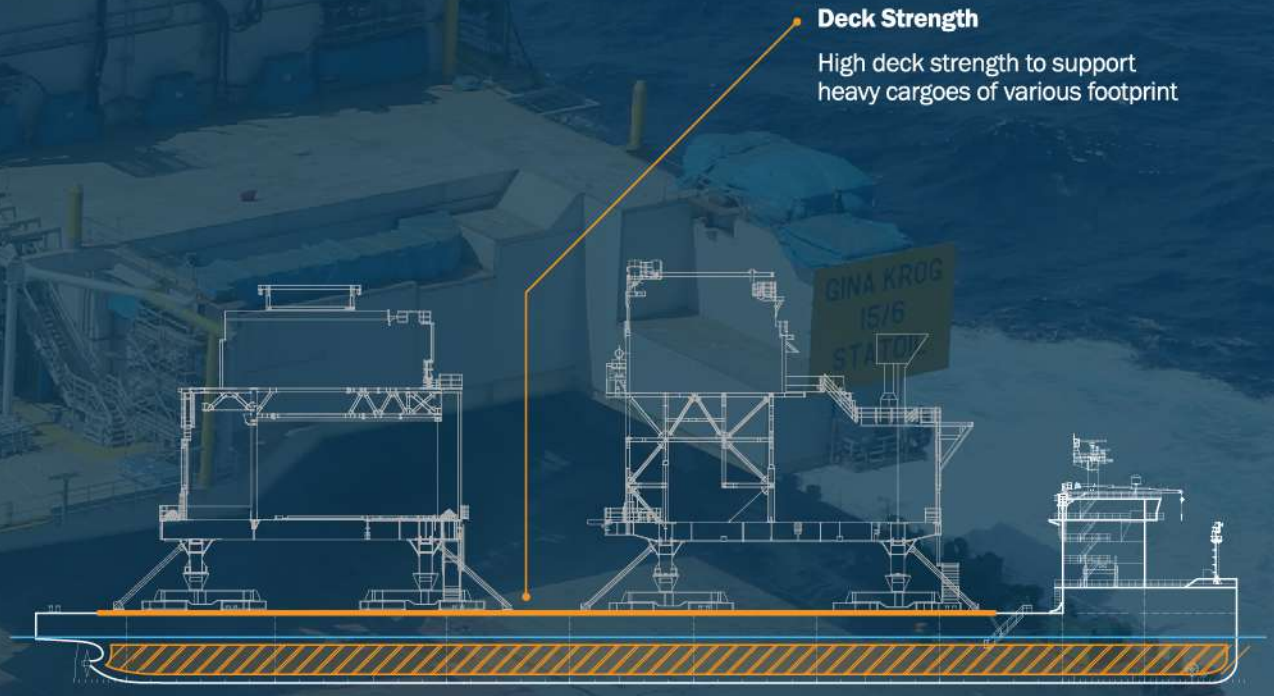
CHANG YANG-DONG FANG
DWT, HTV, free deck space.

STRENGTH OF HML VESSELS

Our vessels were built with high deck capacity and strength with all open stern, also allowing for loading and discharging of cargoes from both the stern and the side, can provide Feasibility and high cost effective.
Another important Characteristic of our vessels is low vessel depth, allowing our assets to reach port with restricted water depth, which allows the loading and discharging of cargoes without the need for spacer barges or other floating equipment.

DECK STRENGTH:

When it comes to transporting heavy machinery, industrial equipment, and other heavy items, a high deck strength capacity is essential to ensure safety and performance.
An effective deck structure minimizes the chance of damage to the cargo or the crew as well as the risk of shifting of cargo. This contributes to the safety of cargo and crew during transit.



Deck Strength

High deck strength to support heavy cargoes of various footprint

High Ballast Capacity

High ballasting capacities for operations in high tidal areas

Mega Passion	8 x 3,000 m³
Mega Caravan	4 x 2,500 m³
Mega Caravan 2	4 x 2,500 m³
Mega Trust	6 x 2,500 m³

BALLAST CAPACITY

A significant ballast capacity provides improved management of the carrier's buoyancy and stability, facilitating smooth movement even when faced with fluctuating load situations. This contributes to the overall performance and reliability of the carrier.
Cargo can be distributed more evenly across the deck, reducing stress on any single point and preventing potential damage to both the cargo and the carrier structure.

LARGE FREE DECK

A large free deck allows for transportation of oversized or unusually shaped cargo that might not fit into standard container vessels, such as machinery, wind turbine blades, or large construction materials. In addition, more open space allows for more efficient loading and unloading, reducing port time and associated ports.

LOW DEPTH

In addition to entering smaller or less developed ports, which can mitigate congestion in larger ports and contribute to more balanced global trade, shallow draft ships can access ports at less depth, potentially reducing the need for extensive dredging or other infrastructure improvements, leading to cost savings.

OUR PROJECTS

GIGA / MEGA Shipblocks
(SHI Long term charter)

EXCELLENCY OF HML

We provide the best service through our divisions:
CCR
ECM
PMO
SPS

Project Execution:
Scheduling, Control Delay impact analysis and milestones management.
Loading, offloading planning and technical analysis
Ballast system & Vessel equipment operation planning
Voyage and transportation planning and technical analysis.
Test and inspection procedure for each activity.

Project Specific Risk Assessment.
Through review & analysis for job safety risk related to Project Requirement.
Study on measures to counter the Decline of Safety and Accident Control at Each step of process.
Cargo-securing monitoring during voyage.

Plan, Preparation Management
Vessel Management
Vessel Repair
Vessel Modification
Vessel Dry Dock
Vessel Class Survey
Vessel Spare, Store, Paint Chemical and ETC purchase & supply.
Sub-contractor management.
